62-18133

Trans. of Archiv für das Eisenhüttenwesen (Germany)
1938, v. 11, no. 9, p. 417-419.

DESCRIPTORS: *Thermochemistry, *Iron, Smelting,
*Slags, Heat of formation, Oxides, Silicic acids, Glass.

Report is made about the heats of solution of four different slags of the iron smelting operations, and the heat of formation from the oxides is calculated approximately. The latter decreases with increasing silicic acid content. The same observation is made on sodium waterglasses. That the "acid" process offers particular thermal advantages is doubtful according to this, until exact calorimetric values are available.
